Profile

Driven backend web developer with hands-on experience building scalable systems and SaaS tools in a fast-paced startup environment. Skilled in creating robust APIs and infrastructure, with a strong foundation in Machine Learning as a third-year university student. Passionate about building intelligent, efficient solutions that bridge software engineering and data science.

Work Experience

Backend developer at Comment Cloudtech Kft. - Budapest, Hungary (2023 - -)

Designed and implemented RESTful API endpoints for a custom webshop engine, enabling seamless frontend-backend integration.

Managed and optimized various databases to support scalable and efficient data access patterns.

Developed and maintained SaaS tools and internal middleware services, including rate limiters, logging systems, and usage tracking tools.

Deployed and monitored backend services, ensuring high availability and performance through Cloudflare configurations and reverse proxy setups.

Education

Lapin AMK - Rovaniemi, Finland (2022 - 2026)

Machine Learning & Data Engineering student, studies currently ongoing.

Skills

- Backend Development: RESTful API in JS/TS
- Database management: PostgreSQL, Cloudflare D1 (SQLite)
- Machine Learning: Data processing and model evaluation using Python
- Ability to work under time pressure
